

CLEAN WATER EMPOWERS

When you eliminate waterborne disease from a village you empower that village in more ways than you can imagine. Recent studies have shown VillagePointOne filters eliminate up to 85% of all diarrhea disease within the community just weeks after implementation. The filter pays for itself within a year with money that would have been spent on medical bills or fuel/wood to boil water. Income that was spent on medical bills for preventable diseases is now spent on food and other essential items. Men and women are healthy enough to work and earn a living. Parents don't have to stay home from work and tend to their sick children. Children can attend school and get an education.

300 filters have reached 1349 people in a total of 8 communities. This is not the beginning or the end of this amazing project, to date 970 filters have been distributed throughout Nicaragua and SAFE WATER PLUS (+) will return for another distribution.

Milagros de los Angeles 34, a mother of 3, shares her story after receiving a bucket filter 18 months earlier. Pictured (left to right), Kenet, Ruby & David. "The health of my children has improved a lot. Now we drink water knowing we won't get sick because it has already passed thru the process of the filter."

Realizing how important water is to the health of the people, Light in the World Development Foundation has committed to

implementing a water filter program in Togo, Africa. Partnering with LWDF, SAFE WATER PLUS provided the initial 50 filters to be distributed.
